Property Description

We bring together a community of residents who love Nosara, and want to live here in harmony with their most important values. We are creating a unique project that sits lightly on the land and maintains natural systems: we believe that community and personal wellbeing are inextricably linked to a thriving natural world. We welcome you to explore this opportunity to live together in a place that is thoughtfully designed to strengthen our connections to the forest, the beach and sea, and our family and friends. Our Approach The foundation of the community is our commitment to knowing the site and understanding our impact within natural systems. Based on our years of study and research, we have developed our master plan to ensure we build and live lightly on the land, while preserving biodiversity and contributing to the well-being of our local community. Homesites We have arranged our home sites based on the comprehensive analysis of our site studies, as well as the natural characteristics and flow of the property.
